

CENTREON Corporate Backgrounder

Centreon is a privately held software provider for enterprise IT monitoring of converging and hybrid infrastructures. Founded in 2005, Centreon has evolved into a leading standard in commercial open source monitoring. Today, the Centreon monitoring platform is downloaded over 3,000 times per month and used by an estimated 200,000 IT users worldwide.

Centreon EMS, the company's flagship business-critical monitoring solution is renowned for its ability to deliver unified views and streamlined, interoperable monitoring for decentralized IT operations with converging infrastructures. It is specifically designed for IT operations management (ITOM) seeking to avoid costly downtime and boost performance analysis, as they manage big data, integrate new toolsets, and exchange data from multiple sources.

Mission

Centreon is committed to helping organizations digitally transform and future-proof their IT operations. Its mission is to deliver a robust and scalable, single-source IT infrastructure monitoring tool that improves uptime, reduces costs and improves performance analysis of business-critical systems and applications. The company is committed to continued investment in research and development, as it builds integration-friendly frameworks, and innovates in the area of IT monitoring interoperability and data correlation.

Founders

Romain Le Merlus and Julien Mathis founded Centreon when they graduated from EPITECH, a computer science school. Their goal was to create an entirely new IT monitoring tool based on open source software. They believed that open source would provide a better, more efficient monitoring tool that could scale to integrate all data sources as they evolve, from legacy systems to cloud services. Together they have grown the company into a global provider of integrated IT infrastructure monitoring services that is currently experiencing upwards of 30% year on year growth.

Customers

Centreon is a leading and trusted service provider to SMBs and Fortune 1000 companies across a wide range of public and private sectors, such as financial services, industry, utilities, retail, telecommunications and IT. Its enterprise customers include global brands such as Airbus, Air Caraïbes, Bolloré, BT, CGI, Euler Hermes, Kuehne + Nagel, LMVH, Red Bull, Ricoh and Salomon.

Centreon is a trusted channel partner to resellers, system integrators and developers, offering comprehensive training and certification within a tiered Valued IT Partner (VIP) program.

Operations

Centreon is headquartered in Paris, France with sales offices in Toulouse and Luxembourg. Its new North American head office is based in Toronto, Canada. For more information visit www.centreon.com.
